Amendments to the Water Quality Control Plan for the Sacramento River and San Joaquin River Basins for the Control of Diazinon and Chlorpyrifos Runoff into the Sacramento-San Joaquin Delta, June 2006 Final Staff Report	x								Diazinon and chlorpyrifos are organophosphorus pesticides widely used in agriculture and formerly widely used in house and garden products. Recent restrictions for agricultural use and the elimination of nearly all household use has resulted in significant reductions in the detection of these pesticides in surface waters. Many home and garden products now contain pyrethroids instead. Diazinon and chlorpyrifos (presumably from agricultural use) are still regularly detected in sloughs and tributaries, particularly around the edges of the Delta.
Amendments to The Water Quality Control Plan for the Sacramento River and San Joaquin River Basins For The Control of Methylmercury in The Sacramento-San Joaquin Delta Estuary Staff Report Draft Report for Scientific Peer Review June 2006									Mercury is primarily a threat to birds and mammals (including people) that eat fish. In this document, the threatened or endangered wildlife species listed as being at significant risk from mercury are all birds. Mercury is part of the CALFED program primarily because of its potential risk to people who eat fish from the Bay-Delta.
2006 CWA Section 303(D) List Of Water Quality Limited Segments Requiring TMDLs									There are numerous water body segments within the Delta listed as impaired for various pollutants. These impairments must all be addressed by a TMDL at some point although they are prioritized by date. (This list is statewide. The CALFED program addresses impairments in Region 1 (Central Valley) and Region 2 (SF Bay). Once a TMDL is adopted it is incorporated into the appropriate "basin plan".
The Water Quality Control Plan (Basin Plan) for the California Regional Water Quality Control Board Central Valley Region, Fourth Edition	x	x							The Central Valley basin plan covers the Sacramento River Basin, the San Joaquin River Basin, and the Delta.
Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary	x	x	x	x					* The chloride objective indirectly (and intentionally) provides some protection against bromide contamination as do some of the EC standards. The SWROS continues to hold hearings to address issues raised in this iteration of the Delta plan to prepare for its next periodic review.
San Francisco Bay Basin Water Quality Control Plan									The SF Bay Region includes Suisun Bay and Marsh extending upstream to Gracie Slough near Pittsburg including a small part of the legal Delta around Chipps Island and Browns Island.
